

Wireframe & User's Flow (1)

Categories:

The Categories page is the first step of allowing the user to browse the app's catalogue of plant guides. Plants are placed into broad categories to help narrow down based on interest. After selecting a category from the previous page, a list of entries is displayed. This allows the user to continue browsing while narrowing down their search.

Care Guide:

Selecting a plant from the Categories opens an article with information about the plant's characteristics, growing season, specific care instructions, and related video.

Add to Garden:

The Add to Garden function allows the user to save a plant's Care Guide to the app for easy referencing. A pop-up window will appear to notify the user that the plant's Care Guide has been saved.

Main Menu:

Tapping the Menu icon in the top nav bar prompts a window that lets the user access various features of the app.

My Garden:

My Garden is the user's personal page, providing access to saved Care Guides. The user is allowed to create new folders to better sort them.

My Garden:

By tapping on the leaf icon (meaning that the seed has been planted) the plant automatically adds to the Reminder, and presets the time and date needed for watering in the current week.

Reminders:

The user can swipe each reminder notification once they have completed watering the assigned plant to log their daily watering tasks.

Home:

The Home page features scroll down list of plants that can grow based on the user's regional climate.

Categories:

In this version categories can be accessed through hamburger menu.

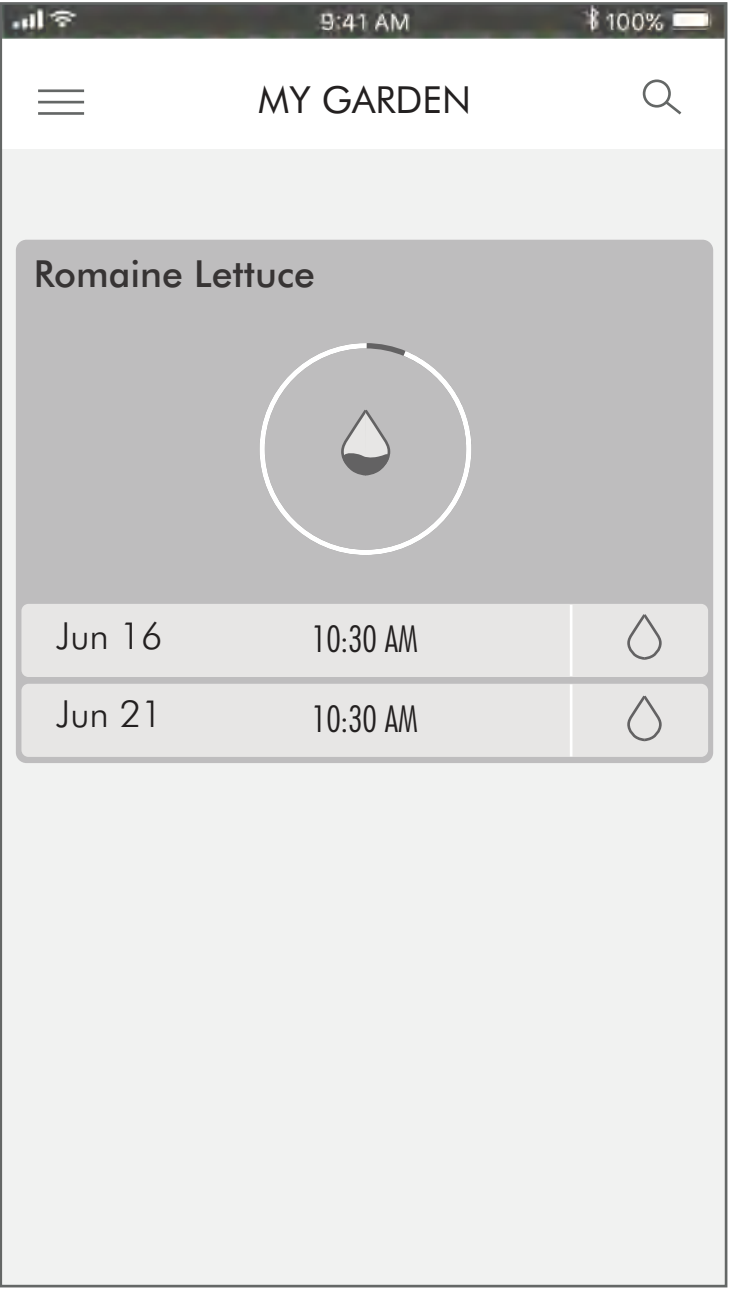

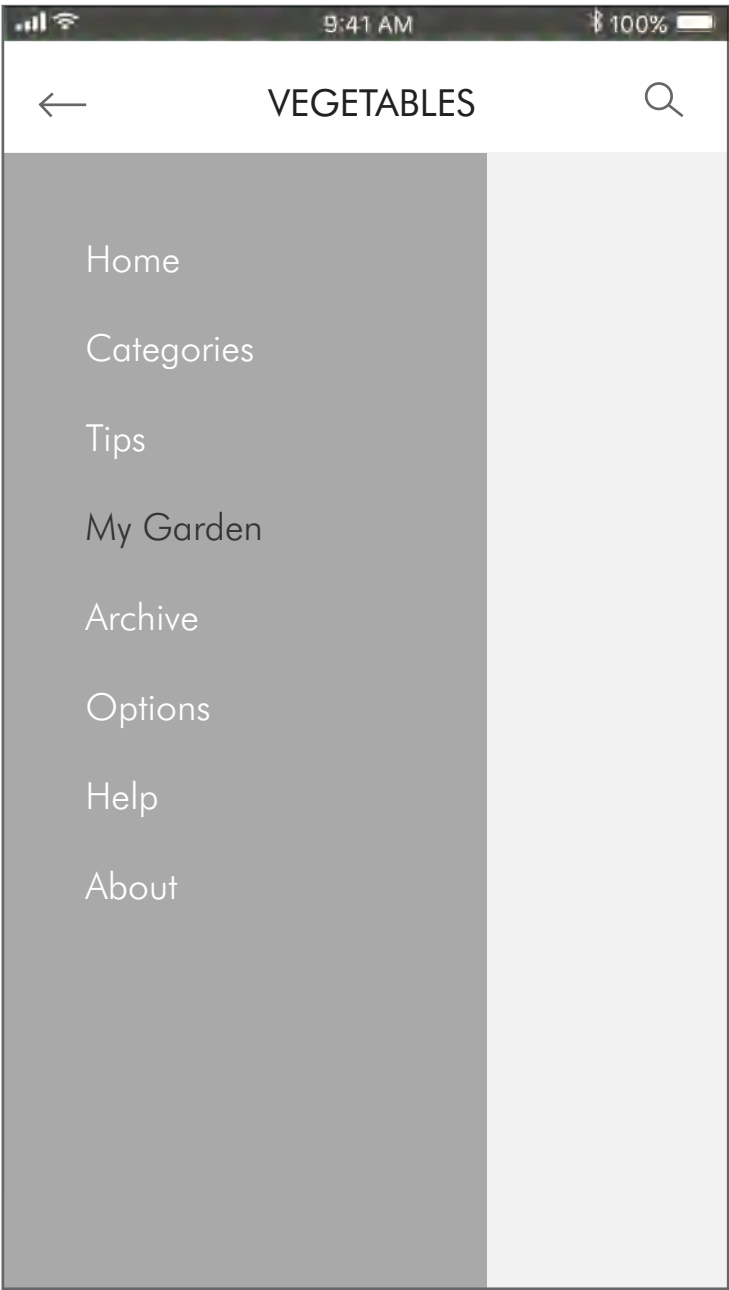

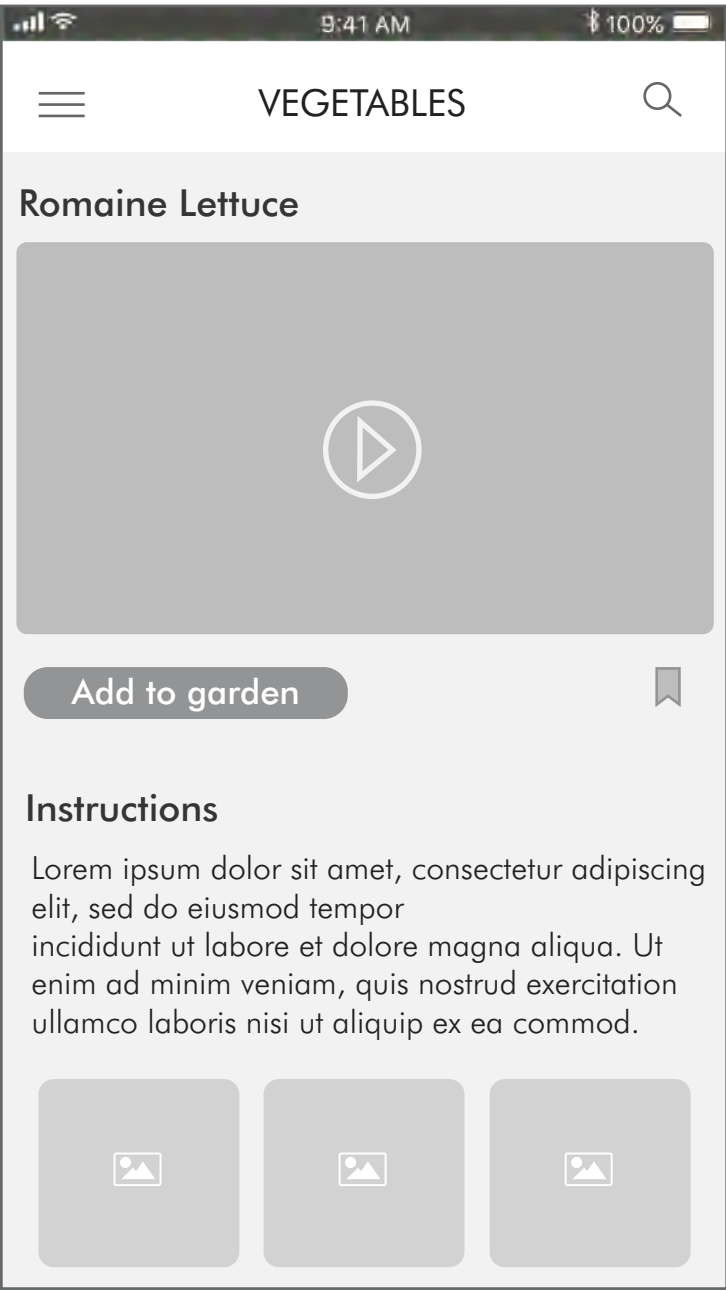

Wireframe & User's Flow (2)

Categories:

This version has two columns with images for the broad category, and one column without images for the second category.

My Garden:

After adding a plant to my garden, it automatically sets the time and date. For saving the care guide, user needs to tap on bookmark icon and it will be accessible through Archive.

Onboarding:

When starting up the app for the first time, the user will be prompted to select their current region. This helps the app suggest plants that are appropriate for the user's climate.

Home:

The Home page features swipe-through menus of plants that can ideally be started in the current month, as well as offering suggestions for plants to grow based on the user's regional climate.
